Exam : **C-STC-2405**

Title : SAP Certified Associate -
Solution Transformation
Consultant with SAP Cloud
ALM

Vendor : SAP

Version : DEMO

NO.1 Which of the following activities does SAP recommend you do when a company is starting a greenfield SAP implementation project?

Note: There are 2 correct answers to this question.

- A. Set up and run SAP Cloud ALM
- B. Run SAP Readiness Check
- C. Run a Fit-to-Standard workshop
- D. Set up and run SAP Solution Manager

Answer: A,C

Explanation:

For a greenfield SAP implementation project, SAP recommends:

Set up and run SAP Cloud ALM: To manage the implementation lifecycle.

Run a Fit-to-Standard workshop: To ensure that the solution aligns with business processes and SAP best practices.

NO.2 For which of the following scenarios can you use Tricentis Test Automation for SAP integrated with SAP Cloud ALM?

- A. Testing and validating business processes in SAP solutions
- B. Change Impact Analysis
- C. Testing and validating non-SAP solutions
- D. Automation of productive business processes

Answer: A

Explanation:

Tricentis Test Automation for SAP, when integrated with SAP Cloud ALM, is primarily used for testing and validating business processes in SAP solutions. It helps ensure that business processes are functioning correctly after system changes, upgrades, or new implementations.

NO.3 In SAP Cloud ALM, which of the following attributes can you use to classify documents?

Note: There are 2 correct answers to this question.

- A. Deliverable
- B. Owner
- C. Priority
- D. Risk level

Answer: A,B

Explanation:

In SAP Cloud ALM for Implementation, documents can be classified using specific attributes. The "Deliverable" and "Owner" are common attributes that allow users to organize and manage documents more efficiently. These attributes help to categorize the document based on its purpose and responsibility.

Deliverable: Refers to the tangible or intangible output of a project that needs to be delivered to the customer.

Owner: The individual responsible for managing the document or deliverable.

NO.4 In SAP Cloud ALM, where can you find an overview of multiple projects?

- A.** In Cross-Project Analysis
- B.** In Solution Process Traceability
- C.** In Test Execution Analysis
- D.** In the Overview page

Answer: A

Explanation:

The Cross-Project Analysis feature in SAP Cloud ALM provides an overview of multiple projects. It allows project managers and stakeholders to analyze project performance and status across different implementations, ensuring alignment and progress tracking.

NO.5 What are some of the use cases of SAP Cloud ALM for operations?

Note: There are 3 correct answers to this question.

- A.** Health Monitoring
- B.** Job Monitoring
- C.** Configuration Monitoring
- D.** Trace Analysis
- E.** Business Process Monitoring

Answer: A,B,E

Explanation:

The primary use cases of SAP Cloud ALM for operations include:

Health Monitoring: Monitoring system health and ensuring operational stability.

Job Monitoring: Tracking scheduled jobs to ensure smooth execution.

Business Process Monitoring: Ensuring business processes are functioning correctly through real-time monitoring.
